

Callery Pear

Cultivated for the purpose of suiting narrow locations, the Ornamental Pear 'Capital' has a narrow growth habit reaching a maximum of 3 metres wide. The glossy leaves transition from dark green to purple or reddish-orange in the Autumn months providing an impressive display before dropping. Small sweetly-scented white flowers appear in Spring in large clusters accenting the leaf prior to the colour change. Growing well in an open to protected sunny position, this species is frost resistant but drought tender.

You can see a great example of a Callery Pear planting at 114 Carlingford Road, Epping.

 Botanic name	Pyrus calleryana 'Capital'
 Origin	China, Japan
 Typical height	10m
 Typical width	3m
 Foliage Type	Deciduous
 Leaf	Green, glossy and pointed, round-like shape
 Bark	Fissured or wrinkled
 Flowers	White, round and five petaled
 Fruit Pod	Light Brown, pea-sized fleshy capsule
