

Spotted Gum

This majestic drought-resistant native tree is beautiful year-round. Stunning when planted as a boulevard, the tree's bark varies in colour from mottled blue-grey, to cream, pink and brown. Its patterned trunk is topped by a cascade of glossy tear-drop-shaped dark-green leaves, and from winter to spring its white flowers are known to be an important source of pollen for native stingless bee honey production.

This tall elegant tree grows a large canopy that provides filtered shade.

| | | |
|---|-----------------------|---|
| <i>a</i> | Botanic name | Corymbia maculata |
| ↑↓ | Typical height | 18-25 metres |
| ↔ | Typical width | 10-13 metres |
|  | Leaf | Large glossy dark green |
|  | Bark | Mottled, blue-grey, cream, pink & brown |
|  | Flowers | White |
|  | Fruit | Pear-shaped woody pod |
