Fitness equipment

Amenities Building

Swingset

PROJECT OVERVIEW

Over the past two months, the Contractor has advanced many elements of the park, including the dry creek bed which will feature groundcover planting, commencement of the amenities building and completion of fitness equipment for a full body workout. The majority of concrete paths have also been poured, which will form an enjoyable circuit path around the entire park.

STAGE CONSTRUCTION

Construction of the stage is well underway, with the majority of the amphitheatre seating walls complete. Foundations for the stage especially the stage floor has begun, as well as preparation offsite for fabrication of the bespoke curved roof.

UPCOMING WORKS

Upcoming works include installation of rubber softfall in the playground, installation of synthetic turf for the amphitheatre and beginning works for the off-leash dog area. Please note as we near completion the site is still an active construction site and is not open to the public.
